**DATA PORTAL**

# Data Portal Module

The Data Portal module is one of the most versatile within the Optimum platform, capable of replacing any excel driven metallurgical accounting function, through to handling any type of mining minerals and metals complex reconciliation equation. This is the data driven platform that enables operations to move the capture and reporting of production data away from spreadsheets.

Data Forms provide simple access for inputting, storing and managing targets, budgets, and limits across the full Optimum platform. External integration with CCLAS, LIMS, and many other production data sources, means Data Portal provides a single point database for important information storage. With seamless integration across the Optimum platform, you now have access to data with capability to view, modify, store, analyze, trend, report, investigate, confirm, and validate at an advanced level.

## DATA PORTAL FEATURES

-  Administer CPEM Limits
-  Multiple levels of security & authority
-  Metallurgical Accounting Solution
-  Administer the Production OEE & Downtime Targets
-  Use data in Dashboards, Trends, Pivot Tables, and Reports
-  Metallurgical Laboratory Solution
-  Convert existing spreadsheet based processes to a full database driven solution
